

ORDERUM SECRETA,

OR AN

Adams 8.68.46

{ ASTRONOMICAL,
ASTROLOGICAL,
METEOROLOGICAL }

D I A R Y,

For the Year of our LORD, 1689.

BEING

The First after Bissextile or Leap-Year;

And

From the Creation ——— 5638 years

From Noahs Flood ——— 3982

From the Building of London 2790

Containing an Ephemeris of the Planets daily motion, their mutual and Lunar Aspects, the state of the Year deduced from the Solar Ingresses, Eclipses and other Configurations of the Planets; the Rising and Setting of the Sun and Moon, with the time of High Water at many principal Havens; Together with an Elected Table of Days, fit for the beginning any Enterprize: With divers other Rules and Tables, suitable to such a work, very necessary and useful for all sorts of people.

By JOHN HARRISSON Studio Philo. astera Med.

And God said, let there be Lights in the Firmament of Heaven; and let them be for signs and for seasons, and for days and years.

Licensed, July 28th. 1688. Rob. Midgley.

LONDON, Printed by John Richardson for the Company of STATIONERS. 1689.

THE second time (renew'd) 'tis my intent
 To publick view thou shouldst thy self present
 To all spectators, that do please to look
 Over the Pages of my little Book;
 Wherein I to oblige you did insert
 Various matters suiting such a work:
 And thus present it to your modest view,
 Because it must be censured now by you.
 I fear not to commit it to the wind,
 Nor doubt not but it will your favour find.
 I was impartial, that you might not say
 That Love or Fear did sway me either way,
 But I with all things else must Times obey.
 What I inserted, others out did raze,
 I might not meddle with our Native place:
 What here I look for's put beyond the Seas,
 I must others, my self I may not please:
 Yet Country-men I do present you here
 A useful Servant for this present Year.

Dundee, Sr. Andrews, Lisbon, Silly, Maze, S. Lucas	0	3	Substrat.

Gransey, Flamouth, Severn Mouth, Fou, Waterford	2	1	

To find the time of High Water at any of the places here named; First, seek in the Kalendar the day you desire, then see at what time it is High Water at London-Bridge, then for the places in this Table you desire to know the time of High Water; see what hours and quarters of hours stand against them, which you must add to or substract from the time of High Water at London-Bridge, as the Table directs. Example, April 5. It is High Water at London-Bridge 3 hours 18 minutes after midnight, and Quinborough, Southampton; &c. 3 hours to be taken from the 3 hours 18 minutes, there remain 18 minutes past midnight for the time of High Water at those places: But for Gransey, Flamouth, &c. you must add 2 hours 1 quarter, which makes 5 hours 33 minutes; the time of High Water at those places.

A Compendious Chronology of Memorable Accidents, agreeing with the best Authors Computation.

Advent Sunday, December	1

In this year 1689 will happen two Eclipses, and both of the lesser Light, viz. the Moon, and they will be both visible, total and central in our Hemisphere; The first will happen on the 25th of *March*, about seven a clock at night, and will be Celebrated in the fifteenth degree of *Libra*, the Moon being in her South Node. It will be a famous opposition, and worthy observation.

The second of them will be on *September* the 19th. about two a clock in the morning, and celebrated in seven degrees of *Aries* at the time of this Eclipse; the Moon is also in her South Node, and it will be a great Eclipse; of both which I shall make a larger observation in the latter part of the Book.

A Table of Expences and Wages.

A Table shewing the Longitude and Latitude of many Principal Cities in the World, their longest days, and the Climes they lye under, with their differ. Merid. and way of bearing from London

A Table of Terms for the Year 1689.

Return or Effoign dayes.	Days of exception	Return Brevium.	Days of appearan.
<i>Hilary Term begins January 23. ends February 12.</i>			
<i>Octab. Hill.</i> January 21	Jan. 22.	Jan. 22	Jan. 23
<i>Quind. Hill.</i> Jan. 28	Jan. 29.	Jan. 30	Jan. 31
<i>Craft. Purif.</i> 4	Febr. 5	Febr. 6	Febr. 7
<i>Octab. Purif.</i> 11	Febr. 11	Febr. 11	Febr. 12

<i>Easter Term begins April 17. ends May 13.</i>			
<i>Quind. Pasch.</i> April 15	April 16	April 16	April 17
<i>Tres Pasch.</i> April 25	April 26	April 26	April 27
<i>Mons Pasch.</i> April 29	April 29	April 30	May 1
<i>Quinq. Pasch.</i> May 2	May 4	May 6	May 7
<i>Craft. Ascen.</i> May 9	May 11	May 11	May 13

<i>Trinity Term begins May 31. ends June 19.</i>			
<i>Craft. Trin.</i> May 28	May 29	May 30	May 31
<i>Octab. Trin.</i> June 3	June 4	June 5	June 6
<i>Quind Trin.</i> June 10	June 11	June 12	June 13
<i>Tres Trin.</i> June 17	June 17	June 18	June 19

<i>Michaelmas Term begins October 23. ends November 28.</i>			
<i>Tres Mich.</i> Octob. 21	Octob. 21	Octob. 22	Octob. 23
<i>Mens. Mich.</i> Octob. 28	Octob. 28	Octob. 29	Octob. 30
<i>Craft. Anim.</i> Novem. 4	Nov. 4	Nov. 5	Nov. 6
<i>Craft. Mart.</i> Nov. 12	Nov. 13	Nov. 14	Nov. 14
<i>Octab Mart.</i> Nov. 19	Nov. 19	Nov. 20	Nov. 21
<i>Quin. Mart.</i> Nov. 26	Nov. 26	Nov. 27	Nov. 28

The Terms begin and end, yet strife ends not
Amongst contentious Men, who seek and plot
Their Neighbours ruine, by unjust designs
Make small affronts equal with hainous Crimes :
Yet if i'th' end he should be Conquerour,
Gets nor Fame, nor Wealth, nor Praise nor Honour :
But O Revenge it is, if that he gains,
Makes recompence for all his cost and pains.

The Regal Table.

Charles	21630	1648 Jan. 30	36 0	4 Feb. 6	Westminster
James	21633	1685 Feb. 6	Grant the King a long Life.		

King, the awfulest Name that's under Heaven,
 Whose Power by the immortal God's is given.
 From whom over second James His Throne does grace,
 Who is descended from a Glorious Race;
 Yet cruel Death being Victor over all,
 Cedars and Shrubs promiscuously do fall:
 This to supply, see what great Jove hath done,
 To Crown the Age with an illustrious Son.

January hath xxxi days.

Christ Circumcised on this Month first day,
Whereby at once that Type He took away :
* When from the *Gentiles* that did live afar,
Three *Magi's* came directed by His Star :
And with them Presents to Him they did bring.
Paul was Converted, *England* lost her King.

* On Epiphany Christ was manifested to the Gentiles by his star which drew the 3 *Sages* to worship him; also on the same day of the Month 30 ye. after the Holy Ghost appeared'd like a Dove at His Baptism.

February hath xxviii days.

The Feast o'the Virgins Purification

Testified Christ's real Incarnation;

When He in the Temple was presented,

He the true Messiah was proclaimed.

Matthias * they in *Judas* place did choose, * *The Apostles.*

Was stoned then beheaded by the *Jews*: In this month An.Ch. 51

Mutual Aspects and Observations.

Cloudy, threatening Snow or Rain.

Canis major South 7 at night.

Regulus sets Cosmically, when according to *Ptolome*,

The keen North wind doth blow.

☿ ☉ ☽ Oft bringing Rain or Snow.

Variable.

* ♀ ♂.

* ♂ ☽ It is observed that if i

△ ♀ ☽ Thunder on *Shrove-Tues*

* ♀ ☽ ☽ ☽ day it presages Wind

△ ☉ ♀ flore of Fruit and plenty

☽ Perigæon; 7 stars rises at 1 morning

Now set all bushes whereon fruit does grow

Bears, Pease, Oats, and Seeds for Salads

* ☉ ♂ (for

Temperate; Spika m. ri. at 11 night.

To Bleed be not yet to free,

And in Physick sparing be.

☽ ☽ ☽ Cobworts, Milk, and slimy Fish

Now but bad for Diet is.

☽ Apogæon.

For a cold and slimy food

Clogs the Liver and the Blood.

March hath xxxi days.

This is that Month in which our Heavenly King,
That did Salvation to us Mortals bring;
Descended low to take the form of Man,
Him to restore (when lost) to Life again.
All Praise to God that did by Christ Redeem
Poor Mortals from the Power and Curse of sin.

Barnaby, this Month, became a Martyr;

Also *St. John*, Christ's Royal Harbinger,

That shewed to us the Holy Lamb of God,

Was beheaded by the Tetrarch *Herod*;

Peter (whom Christ bid feed his sheep) and *Paul*,

These Glorious Martyrs both at *Rome* did fall.

An. Christi, 30.

An. Christi, 68.

Saint Jam. s, brother to John, Zebede's Son,
 He in this Month was put to Martyrdom;
 When to the twelve Tribes he had Preach'd the Word.
 Was in Judea slain by Herod's Sword, An. Christi 45.
 Though here his Life he lost, this was his gain,
 He first of all the Twelve did's crown obtain.

										Or in the winter, live
										cold and in want,

St. Bartholomew, Neptie v and here 'tis said,
Was to a King, yet thus a Martyr made.
First beat with cudgels, next day Crucified,
Whilst fastned to the Cross, was flea'd alive;
And last of all before his breath was spent,
His head struck off, thus he to Glory went.

An. Christi, 51.

'Twas in this Month, that cruel Traytors sought,
By Powder Plot to bring this State to nought;
Whom God d smit's'd, and did protect it so, *An. Christi*
His saving Mercy to it then did shew, *1605*
Preserving King and People from that Rage,
Which none but Supream Power could allwaige.

Moon
ri. & se

[illegible]

This was indeed that joyful morn to Men,
In which was born a Saviour unto them.
Angels to Shepherds did the Tidings bring,
And Halleluiahs, they to God did sing
To him let all that's good (now in our days)
Give Honour, Glory, and eternal Praise.

THE SECOND PART OF HARRISON'S ALMANACK

For the Year of our LORD 1689.

Being the first after BISSEXTILE.

Illustrated with much Variety; being
both Useful and Pleasant for all sorts
of People.

The Characters of the Twelve Signs, their Names, and the parts
of Man's Body, appropriated to each of them.

♈ <i>Aries</i>	♉ <i>Taurus</i>	♊ <i>Gemini</i>	♋ <i>Cancer</i>
Head & Face.	Neck & Throat.	Arms & Shoulders.	Breast & Stomach.
♌ <i>Leo</i>	♍ <i>Virgo</i>	♎ <i>Libra</i>	♏ <i>Scorpio</i>
Heart & Back.	Belly & Bowels.	Reins & Kidneys.	Secrets.
♐ <i>Sagittary</i>	♑ <i>Capricorn</i>	♒ <i>Aquarius</i>	♓ <i>Pisces</i>
Thighs.	Knees.	Legs.	Feet.

The Characters of the Seven Planets, and their Names.

♄ <i>Saturn,</i>	☉ <i>The Sun,</i>	☾ <i>The Moon,</i>
♃ <i>Jupiter,</i>	♀ <i>Venus,</i>	♉ <i>Dragon's Head,</i>
♂ <i>Mars,</i>	☿ <i>Mercury,</i>	♏ <i>Dragon's Tail.</i>

The Characters of the five Aspects, and their Names:

♂ <i>Conjunction,</i>	♌ <i>Opposition,</i>	△ <i>Trine,</i>
* <i>Sextile,</i>		□ <i>Square.</i>

The splendid Planet *Venus* is Occidental, and our Evening Star, till June
the 13th. then making her Conjunction with the Sun, becomes Oriental, and
our bright Morning Star, to the Years end.

*A Table of choice elected Days for the beginning any Enterprise,
also the most unfortunate Days of this present Year, 1688.*

Sept. 13. Octob. 13. Nov. 11. Dec. 11. {

It was also observed by Antient Astrologers, that between every Conjunction of the Sun and Moon are two unfortunate days, which were accounted most unhappy to begin any kind of business, and were also reputed right perillous to fall sick on or have any accident happen in them, and they are these following, in *Jan.* 3. and 4. days after the change of the Moon, in *February* 5. and 7. in *March* 6. and 7. in *April* 5. and 8. in *May* 8. and 9. in *June* 5. and 15. in *July* 3. and 13. in *August* 8. and 13. in *September* 8. and 13. in *October* 5. and 12. in *November* 5. and 9. in *December* 3. and 13.

Also there be six days dispersed through the year, which are held to be most unfortunate days to have a Child born in; for it will be in danger of an ill death, and will be miserable and unhappy in other humane affairs; and the Antients advise no man to bleed on them; because they be right unfortunate as the Antients teach; and they be *January* 3. *July* 1. *October* 2. *April* 30. *August* 1. and 31.

Moreover in every month there be two days which are called *Ægri*, *Mali* & *Ægyptiaci*; they be called *Ægri* from their effects; because according to the opinion of the Antients, if any fell sick on any of these days, they would hardly, or not escape it: They be called *mali*, because it is bad to begin any work on them; and were called *Ægyptiaci*, because they were observed by the *Egyptians* for those days in which God inflicted the Plagues upon them, which are displayed in these Verses.

Sanguis, Rana, Culex, Muscæ, parvæ pecus ulcus,
Grando, Locustæ, Nox, Mors, prius orta necant.
 Blood, Frogs, Lice, Flies, all Cattle lost their Breath;
 Plague, Hail, Locusts, Night, no man scaped death.

These days were wont to be inserted in the *Roman Kalender*, notwithstanding the prohibition of *Augustus*, saying, *Calendas mensium & dies Ægyptiacos, non observabitis*; and that you may know which they be, take them in the ensuing Verses,

Armis gulse, Dei kalatos, admare dabatur,
Lixa memor, constans gelidos, infantia quosdam,
Omne limen, Aron bagis, concordia ludat,
Chijelinkat, ei coequata, gearcha lisardus.

Now to know by these Verses which those unfortunate days be, you must understand that to each month of the year two of these words are appropriated, the first two to *January*, the second two to *February*, &c. and to find the first fatal day in each

each month, you must count so many days from the beginning of the month, as the first letter in the first word (standing for the month) is inclusively distant from A. in the Alphabet. Suppose we would know them for *May*, *Constance* being the first word for that month, and C. the first letter of that word, and the second letter from A, so the second day of *May* is the first fatal day of that month; also the number of the first letter in the second syllable of the word, that hour of the day is accounted most dangerous, which here is S. which is the 17th from A. so that the 17 ho. of the second day of *May* is most fatal; but for the last fatal day of each month, you must reckon so many days from the last day of the month, as the number of the first letter of the second word, which for *May* is *gelidos*, G. being the sixth letter from A, so six days before the last of *May*, which is the 25 day, is the second unfortunate day; so as before the first letter of the second syllable shews the most dangerous hour of that day; & sic cetra.

How to erect a Figure by the following Table of Houses.

Suppose you would erect a figure for the second day of *May*, at 3 a Clock after Noon. First, seek the place of the Sun on that day in the Kalender, which you will find to be in 22 de. of γ , omitting the minutes then in the Table of Houses, find \odot in γ , and there in the column of the tenth House, seek 22 d. and right against it on the left hand, under time from noon, you will find 3 ho. 18 mi. to be added to your 3 ho. after noon, the time given, which makes 6 ho. 18 mi. which seek in the column, titled, Time from noon, and right against it you have the signs and degrees to be placed on the 6 Oriental Houses, and on the opposite Houses you must place the opposite signs and degrees, and for this time given you will find upon the cusp of the 10 House 4 d. of \odot , on the 11 h. 13 d. \odot , the 12 h. 11 d. 17, the 1 h. 3d. 4 m. \odot , the 2 h. 25 \odot , the 3 h. 24 m. opposites. Fourth House 4 d. \odot , on the 5 h. 13 \odot , the 6 h. 11 d. \odot , the 7 h. 3 d. 4 m. \odot , the 8 h. 25 \odot , the 9 h. 24 \odot ; then seek in the Ephemerides for the Planets places, and place them in the proper Houses of the figure, so have you your figure fit to give a judgment on; in this figure \odot would be found nigh the Cusp of 9 House, \odot in the 5th, \odot in the 2d, \odot in the 5th, \odot in the 5th, \odot on the cusp of the 10th, and \odot nigh the cusp of the 8th House, the \odot in the 7th, and \odot in the 1st; so observing this method you may set a figure for any proposed time,

To find the hour of the night by the Moons shining on a Sun-dial: First, seek the Moon's Age in the Kalendar, then in the Table look what Hours and Minutes stand against it, which you must add to, or subtract from the hour that the Shade falls on the Dial: Example, *January 31.* observing the Shade upon the Dial to fall at Eleven a Clock, I seek in the Kalendar for the Moon's Age, I find it to be 9 days, which I seek in this Table, and against it I find 7 hours 12 minutes to be added to the eleventh hour that the Shade was upon the Dial, as the Table directs, which maketh 18 hours 12 minutes, from which deduct 12, there remains 6 hours 12 minutes the hour of the night. Note, when your Numbers added together exceed 12, you must deduct 12, the Remainder is the hour of the night.

A short Astrological account of the four Quarters of the Year, and first of the Winter Quarter; or that duration of time in which the Sun passeth through the three Signs, Capricorn, Aquaries and Pisces.

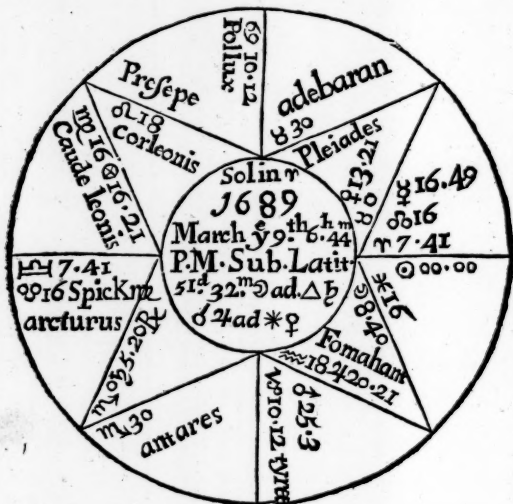

WHich took its beginning Decem. 10. 7 h. 28 m. after noon, 1688. at what time the Sun is in his greatest South declination, and at the furthest point from our Zenith, causing with us shortest days and longest nights, inclining the Air to thick, gross, earthly, cold vapours; at what time in the position of the Heavens Ω ascends, and \vee culminates, and the Planets are all posited in Southern Signs, from whence I conjecture the inclination of the Air in this Quarter rather dry then wet, with store of rimy Frosts.— Diseases of this Quarter, Colds, Hectick dry Coughs, Scurvy, Consumptions, distempers in the Back, corruption of humours, &c.— Many men will be striving for Honour, and may probably find Friends in their pursuit, but best to seek to old men, especially of Martial Orders, &c. But before I pass over this Winter Quarter I think it necessary to look a little back, and observe that conjunction of h and δ which happened on the 7th of *October*, in the first degree of m , a fixt nocturnal cold phlegmatick feminine and northern Constellation of the watry triplicity, and a sign of treachery, deceit and strife, and is also intercepted in the sixth house where this δ is celebrated, which is a cadent and unfortunate place of the Heavens, signifying troubles, diseases, sicknesses, &c. δ being also depositor of the conjunction, it being celebrated in his house; also he lord of the triplicity, and was also depositor of the eclipse of the Sun in *October* preceding, which happened within 5 min. 28 sec. of the place of this δ , h being Almuten or lord of the figure of that eclipse which promised but little tranquillity to the inhabitants of this Globe, the effects whereof are not yet fully manifest, with which the influence of this δ will confer to augment the consequences thereof; also sora or the lot falls in \vee (nigh the cusp of the twelfth house of the figure) whose depositor is δ ; therefore those Countries under his government must expect to participate of the effects of this two conjunctions, viz. of \odot and D in *October* and h and δ in *November*, 1688. in the figure of which δ we have 8 degrees 11 min. of II ascends, and 4 deg. 50 min. of

of \approx culminates the Planets all posited in the occidental parts of Heaven, and without essential dignities ; (except δ who is dignified by houses, and triplicitly according to *Ptolemy*) neither do they mutually receive, nor friendly aspect one another, save γ separate from \star of the \odot and the \sphericalangle applying to \star with \odot , but she in her detriment can be but little advantageous ; Mercury separate from conjunction with Venus, and applying to conjunction of the Sun, Mercury being most accidentally dignified in the figure and almuten thereof, but is neither in aspect nor reception with his depositer nor other benign Planets that can augment his vertue, nor himself essentially dignified ; therefore we may expect an unpleasant season in Winter, darksome cold Air, much Snow, rimy Frosts, Mists, &c. afflicting mans health with cold phlegmatick distempers ; some mens minds disturbed with jealousies and fears, others fill'd with fraud, treachery, &c. carried on with privacy ; but Mars essentially strong in his own house the Souldiers may expect to prosper : Here I might freely enlarge but——next

Of the Spring Quarter.

IN which all vegitive things begin to spring out of the bowels of the Earth, adorning the superficies thereof with infinite varieties desirable to all creatures, and welcomed by their thankful receiving and chearful enjoyment of the same, each according to their several degrees of capacity, for now the Suns Rays begin to warm both the Earth and Waters, making them fit for production ; a time wherein animate creatures do generate ; now the pleasant beams of the Sun expels the cold and rarifying the Air render it delectable to all creatures ; the Spring Quarter takes its beginning when the Sun enters the first point of the equinoctial sign Aries, which this year happens (according to *Rodolphus's Tables*) on *March 9.* at 6 ho. 44 min. after noon, at which time the Heavens are posited as in the following Figure,

wherein

wherein the four moveable signs possess the four grand angles, viz. Libra 5 d. 25 m. upon the cusp of the ascendent, and ☾ 7 d. 2 m. culminating, and the Sun is located in the sixth house depressed below the Earth, and weak in the figure, the Moon in Piscis perigrin decreasing in light, and hastening under the Sun beams; Saturn posited in the second in 5 d. 20 m. of Scorpio, out of all his essential dignities retrograde, and in *via combusta*, Jupiter located in the fifth house of the figure in 20 d. 21 m. of Aquarius sign, wherein he hath no essential dignities, save a term of 5 d. according to *Ptolamy*, by whom he is Ruler of the fiery triplicity, to which I do not willingly adhere, but rather respect Mars to be Governour thereof; so that I shall except neither of these to be Lords or Governours of the Year, but shall accept of Mars posited in the fourth House in 25 d. 3m. of

of ♄ in his exaltation, and accidentally dignified in *Imo Caeli*; and also being depositer of ☉ in ♋, and lord of the triplicity; also for his being lord and depositer of the subsequent lunation, with whom I accept ☿ for co-significator; he being accidentally strong in the figure located in the seventh in partile ☿ with ♄; also ♄ his house and exaltation is co-significant of the house the Sun is posited in, and himself co-significator of the same; as also that he is a Ruler of the ascendants triplicity, also for his being Lord of the ascendant, and having essential dignity in *medio Caeli* in the subsequent lunation; also for his being depositer of the Moon in the preceding opposition of ☉ and ♄, Mars being Ruler of the tenth house, and by some allowed Lord of the ascendants triplicity; therefore I accept them Lords of the revolution; now Mars posited in *imo Caeli*, or the lowest part of the Heavens in South Latitude in the house of Saturn, and in reception with his depositer, he being retrograde in Scorpio, a malignant sign, and in *via combusta*, ☿ also hasting to a hateful square of Saturn his depositer, destroying the tranquillity and good of things hoped for. *Hermes* also saith, if ☿ shall be in ♄ it makes a destroyer of men, and a delighter in shedding blood, and also that his influence is never abated, unless by the interposure of a benevolent Planet, which here is wanting aphor 43 and 48, from these positors I gather that Mars is not a fortunate Ruler, neither from him can many Countries beyond the Sea expect a prosperous year; the Moon separates from an aspect of Saturn, which according to *Bethem*, signifies trouble and discord; next I shall according to ☿ position give you his natural inclination, with a word or two of their pretences, he being co-significator with ☿, and located in the seventh house in ♋, the house of ☿, he being his depositer, but neither beheld by aspect, nor dignified by reception, so that he is not at all fortified by his depositer; also he is located in the angle of contention, quarrels, controversies, public enemies, &c. not beheld by any benevolent Aspect, but applies to retrogradation, and hasting under the Sun-beams; therefore he being convertible in nature, will sympathize in his influence with the society he is entertained withal; now as I intimated before is a moveable sign ascending, as also upon the cusp of every Angle; therefore by some mens opinion, judgment should be drawn from this figure, but for

for the Spring Quarter; but I take this for the fittest time for the whole year, for when the Spring is mild, seasonable, temperate and peaceable, we always expect a plentiful, healthful, friendly and pleasant year, which very seldom fails on the other hand, when the Spring is unseasonable, immoderate, &c. and mens minds possessed with jealousies, contentions, treachery, &c. publick or private, then we cannot expect a fruitful Harvest, a tranquile peaceable year, so that movable signs portend the more expeditious actions of the things signified by them; the like doth ♀ from these positions, expect in the Spring cold Winds, much Rain and Hail; in Summer great Heat, Thunder, Lightening, sudden Tempests, much prejudicial to the Fruits of the Earth; from the co-significators is portended in the World Wars, Tumults, Dissentions, Violence, Imprisonment, sudden Death, &c. Frenzies, Madness, burning Feavers, &c. And if ♂ and ♀ be significators of mens substance, as they are allowed to be, and being both located in the 8th house, ♀ but just separate from a ♂ of Saturn, imports a detrement therein: Also if the first house signifies bodies, lives, dispositions, &c. Aries and Saturn co-significators thereof, as they are granted to be, then ♄ being located in the angle of quarrels and strife, and Saturn posited in the second, unfortunate; therefore but small assistance can be expected from them, and if ♀ and ☿ be significators of publick enemies, as they are received to be, then ♀ located in the house of death, just separate from a ♂ of Saturn and ☿, posited in the ascendant, which is made unfortunate by the position of ♄, therein denote that the rage of mens envy will touch one anothers lives; and that in those Countries, whose co-significators are ♄ and ♂, and those Regal Powers who have Saturn for their significators, he being in the 8th from ♄ portends detrement. I could suspend my judgment on these configurations, but— A famous Eclipse of the ☿ drawing near claims my observation, which happeneth *March 25. 6 ho. 42 min. after noon*, being the middle time thereof, and is celebrated in 15 d. 45 m. of ☿: In the figure for that instant you will find 18 d. of ☿ upon the cusp of the ascendant, and 24 d. of ☿ in *medio Caeli*; Saturn in the first house in ☐ with ♂, in the fourth the ☿ separating from a ♂ of ♀; now according to *Ptolomey*, that Planet which hath most dignities in the deserted place and sub-

subsequent angle must be Ruler of the Eclipse. *Origine* observes the place defect of ascendent and mid-heaven, and take that Planet for Ruler which hath most dignities therein, which in the figure of this Eclipse will be found to be ♀, she being depositer of the eclipsed Moon, and Ruler of the ascendant also, her terms being upon the cusp of the mid-heavens, ♄ having his exaltation in the ascendant, and he and ☿ Lords of that triplicity, respect ought to be had to them in judgment of this Eclipse; now ♀ being chief Ruler, and she a Planet of friendly influence, producing kind and fortunate effects to mankind, with much joy, prosperity, felicity, &c. but her being unfortunately located in the eighth house, impairs her benevolency; and in regard ♄ and ☿ are evilly located; ♄ in m in the twelfth house in *via combusta*, and ☿ with ♂ and ♀ in the sixth house retrograde, and in combustion with the Sun, so that the scheme of this figure is but little differing from that of the revolution; insomuch that a great part of ♀ benevolency will be annihilated: Now according to *Ptolemy* the effects of Eclipses do particularly operate in those Countries which are under the government of those Constellations in which the Eclipses happen, this happening in ♋ in the house of ♀, therefore by this Rule the Countries of *Austria, Asatia, Livonia*, &c. should chiefly be affected herewith, but according to *Morinus*, the effects act universally throughout the circuit of the whole Earth, but are particularly active according to the several positors of the Eclipse, and whole Heavens at the time thereof, in respect of the divers places of the Earth; however we may rationally judge that they more manifestly operate in those places whose ascendants are in ♂ or ☿ to the defect place; now this eclipse being celebrated in the 12th house, a place signifying private enemies, prisons, captivity, treasons, villany, and all the miseries of mankind, which pre-lages in the World great troubles; as in the Air storms, tempests, great winds, thunder, lightning, pestilential diseases, dangers at Sea, animosities amongst men, death of great cattle, flies, locusts, caterpillars, &c. hurting the fruits of the earth, manifestly operating in those places before cited. I might enlarge further hereon but—wanting Page room, I shall conclude the Spring quarter (which ends *June 10. 9 h. 39 m. after noon*) with that I ended my last years Almanack with, which with

with those other configurations bore a reflection to the ☿ of ♀ and ☿ in m.

*And now that no unquiet Spirits may
Disturb our union, or our peace annoy :
That no contagions may invade our Air,
Which of no Age, no Sex, nor kind will spare.
Our own ambition first let us destroy,
Then God implore to turn his wrath away.*

Of the Summer Quarter.

WHich commenceth when the Sun is arrived to the highest point of his Meridional altitude, or his greatest declination on the North side of the Equator, which is always when he toucheth the first point of the tropical sign ☊, and making on the North-side the Equator the longest dayes and shortest nights ; it happens this year on June 10. at 9 ho. 39 mi. after noon, and continues whilst the Sun passeth through ☊ ♈ and ♊, in which time the ardent beams of the Sun do concoct and ripen the fruits of the earth, maturing them to perfection fit for the use of man : About the time of this ingress the Air will be troubled, and weather uncertain, sometimes cool and anon extreame hot, with thunder, lightning and tempest ; heats and colds will be apt to be taken ; beware of surfeits, diseases of the breast and stomach, weak digestion, with infirmities of the reins and kidneys, windiness and corruption of the blood, many antient people will dye, which will be the product of this Summer quarter : In the position of the Heavens at the time of this ingress, 22 d. of ♊ ascends, and the 26 of m in the mid-heaven, the ☽ separate from ☿, and applies to a * of ♀, a △ of ☉ and ♀ at the time of the ingress a ☐ of the ☉ and ☿ ; △ of ☿ and ♋, ☿ of the ☉, and ♀ ☐ of ☿ and ♀ a △ of ♋, and ♀ a ☐ of ♀ and ♏, and a Trine of ♀ and ♀, and immediately follow, ♀ ♋ and ♀ being retrograde, from which various configurations we may expect various effects, according to their several significations. Let this suffice for the Spring quarter:

Which is the last Astronomical quarter, but the third according to our *English* account; It is by nature cold and dry, melancholly similar to old age, resembling the element of the earth. and takes its beginning at the Suns ingress into ♊ which is on *Sept. 12.* 1 h. 10 m. after noon, at what time the days and nights are of equal length, the Sun rises and sets at 6 a clock, and hath neither amplitude nor declination from the Equator, tempering the air with moderation, abating the heat, & may be called our second Spring, it being a fit time to take Physick, &c. A time wherein the earth puts forth herbs afresh, and trees shoot forth tender branches, till the sun arrives in ♋, at what time the air is made more cold and moist, oft times producing rainy and misty weather, till he comes into ♌, at what time again the air is oft subtilized and made serene, by reason ♌ is a sign of the fiery triplicity, accompanied with several stars of a warm nature, oft producing morning frosts and clear days. In this quarter, on *Dec. 19.* happens an eclipse of the Moon, at 17 m. before 3 in the morn.; it is celebrated in 6 d. 28 m. of ♍ the ♀ in ♌ to ♍, and ♌ and ♌ opposing each other, but for want of room, I shall forbear to present you with the posture of the heavens for the time of this Eclipse, but those that see it, will find the first d. of ♍ upon the cusp of the ascend. and 20 d. of ♌ in the mid-heaven, now according to *Origanus* ♌ is Lord of the eclipse by being depositor of the place defected, and ♍ is co-significator by reason she is Ruler of the mid-heaven, also of the ascendants triplicity, the ♀ also being in her terms the ☉ and ♍ will also be concerned herein; now this eclipse happening in ♍, and located in the house of death, and ending in the angle of quarrels the defected place not being beheld by its depositer, nor any friendly Aspect of fortunate Planets, but by a ♌ of ♍ intimates death to common people, and animosities in the World; this Eclipse being celebrated in a sign of the fiery triplicity, and ♌ depositer hereof, it naturally signifies drought, &c. but by reason ♌ is in ☐ with ♌ from a wary sign it will moderate the drought, but ♍ opposing the ♀ from an acry sign we may rationally expect great Winds, &c. herein ♌ being located in the eighth from the place defected, which confirms my judgment

of

of his position at the time of Hammaor, Hag gadolid in arities ^{lpl}
 caret ~~W~~ Sev 2. In short the signification of this Eclipse
 bares so much relation with the other material configurations of
 this year, that they seem to consent so unanimously to one
 event, that I need to enlarge no further hereon.

As you see here,
 So have I drawn the tract of one more year
 From the configurations of the Stars
 And Planets, Aspects in the moving Spheres.
 On them I my conjectures did suspend,
 To know the effects they to the World portend.
 Think it not strange that I herein relate
 Kingdoms are subject to the turns of fate;
 For Angels, Genius, Idea's, Stars combine
 That some may rise whilst others do decline,
 And I insert not more then they do show,
 I fear the worst cause they declare it so.
 We came obnoxious to them first by sin,
 Their power to sway us else had never been.
 Accept this small part of my various store,
 For I at present must impart no more.
